Carpet Cleaner - Kerrick– Instructions for use

PRE-START CHECKs:

- The upper tank is meant to contain the dirty water sucked from the carpet, while the lower tank is meant to contain clean water and detergent.
- The lower tank also contains the vacuum motor, the brush motor and the pump. The control panel is situated on the lower tank.
- DO NOT use the machine as a vacuum cleaner.
- DO NOT let the pump run without any water in it! Check periodically the level of water in the lower tank, while using the machine. As soon as it becomes empty you must switch off the machine, empty the upper tank (which then will be full) and refill the lower tank before activating the pump.
- **Wool carpet must be washed with cold water only!**
-

OPERATION:

- Raise the upper tank after having released it by acting on the lateral hooks.
- Fill the solution tank with cold or warm water, through the filling hole, adding 5% of non-foaming detergent (1/2 liter in 10 liters).
- Reconnect the upper tank to the lower tank with the lateral hooks.
- Connect the machine to the wand or to the accessory with the solution and with the vacuum hoses. The quick-disconnect couplings at the end of the solution hose (the thin one) must be inserted in the correspondent couplings: one is on the body of the machine, and the other one is on the water valve that you find on the wand or on the accessory handle.
- In the same way, you must connect the vacuum hose to the machine and to the accessory handle.
- Put the plug of the cable in the socket. Switch on the water pump and vacuum motor through the corresponding switches.
- At this point the machine is ready to operate.
- You must check the level of water in the recovery tank, to ensure it doesn't get too high.

STOPPING AND AFTER USE:

- Turn off the machine and unplug form the power supply.
- Remove all the water from the solution and recovery tanks.
- Put a couple of liters of clean water into the solution tank and use the pump only, press the lever of the solution valve to clean the internal parts of the pump, of the couplings and nozzles, removing the detergent residues.

If you are collecting the equipment for someone else please make sure this sheet is given to them. If the equipment is being hired for commercial use it should be given to the site supervisor to ensure it is available to all users.
